FOR IMMEDIATE RELEASE

CRT Adds AtmosAir Indoor Air Technology for Purified Air Circulation to all Theatre Facilities

Cortland Repertory Theatre is announcing today that it has installed AtmosAir Solutions bi-polar ionization technology to improve the indoor air quality throughout all their facilities, including CRT Downtown's theatre, lobby and offices as well as in the Little York Pavilion's theatre and backstage areas. The addition of the BPI technology will help improve wellness and safety for all CRT's patrons, employees, guest performers and artistic staff.

AtmosAir's BPI tubes, installed in the theater's HVAC systems, improves wellbeing by suppressing airborne and surface micro-organisms and pathogens, including viruses, bacteria, and mold, and reduces odors as well as unhealthy and irritating volatile organic compounds (VOCs). The technology makes buildings more sustainable while reducing energy and operational costs and adds an extra layer of protection from the spread of coronavirus.

"Having been shuttered for the past year and a half, we are anxious to welcome our patrons and friends back inside our venues to again watch live theatre in a safe, healthy environment," said Kerby Thompson, CRT's Producing Artistic Director. "Upgrading our HVAC systems with this latest technology is a long-lasting health benefit against the spread of coronavirus, and will assure our audience that, as always, their health and wellbeing are CRT's top priority."

"We are delighted to provide Cortland Repertory Theatre a healthier indoor environment," said Steve Levine, President and CEO of AtmosAir. "It's important for those who go to the theater and the staff to feel confident about being indoors. Delivering effective health and wellness measures is going to be essential for ensuring a safe indoor experience. We're pleased to partner with Cortland Repertory Theatre and believe our bipolar ionization technology will be crucial to creating a clean and sanitized indoor environment throughout all their buildings."

Using patented ionization tubes, the AtmosAir's technology cleans the air without using chemicals or creating unwanted environmental byproducts. Its tubes emit ions into the air that seek and mitigate harmful air pollutants. Most passive air filtration systems remove pollutants as the air passes through a filter. With AtmosAir the inside air is continually being purified.

AtmosAir's BPI technology also helps play a role in reducing the spread of coronavirus. Tests performed by Microchem Laboratory, one of the world's preeminent laboratories for testing sanitizing products registered by the EPA and FDA, confirmed that the presence of coronavirus was reduced by 99.92 percent within 30 minutes of exposure to AtmosAir's BPI technology in a contained space.

AtmosAir BPI indoor air technology is installed in over 7,500 locations in the US and globally and widely used in the hospitality industry in casinos, hotels, airports, and cruise ships.

About AtmosAir Solutions

AtmosAir Solutions of Fairfield, CT is a leader in solutions for healthier indoor air. The company provides bi-polar ionization air purification technologies that actively, continuously work to bring the benefits of improved air quality to life in all types of built environments. Every day, AtmosAir is helping the world to see air differently, with solutions that measure, validate, and display real-time indoor air quality data, and deliver ongoing, tangible benefits to human health and productivity. AtmosAir technologies are installed in

more than 7,500 buildings worldwide, including commercial offices, health care settings, hotels, cruise ships, universities, and sports facilities. More information can be found at www.atmosair.com

About Cortland Repertory Theatre

In 2022, Cortland Repertory Theatre will celebrate their 50th Anniversary of producing professional theatre to Central New York audiences. For most of their history, CRT has been a summer theatre offering musicals, plays and children's theatre on the stage at the national historic Little York Pavilion in Preble, NY. In 2015, their operations expanded to year-round with the opening of CRT Downtown in the City of Cortland. This black box/cabaret space provides a venue for winter productions, concerts, comedy nights and special events. With a mission statement of providing quality live entertainment at an affordable price, CRT is supported by a strong base of volunteers and local businesses, and hires professional actors, directors, technicians, and other artistic staff members from around the county. Visit www.cortlandrep.org for more info and upcoming shows.
